

Product Upgrading Information

Discover the New Release in DP-30
Digital Ultrasonic Diagnostic Imaging System

【What's new】

Shenzhen Mindray Bio-medical Electronics Co., Ltd developed the latest innovations of DP-30, which has been officially upgraded in May, 2013.

- **New Platform:** platform based on Intel processor and powerful operation system contributes to the fast image processing and scalability of DP-30.
- **New Imaging Technology:** equipped with advanced technologies, such as speckle reduction imaging, image optimization, steer and spot zoom, DP-30 offers you high image performance.
- **New Work Flow:** with an intelligent workflow, DP-30 maximizes your efficiency.

【Product Description】

MINDRAY's DP-30, Digital Ultrasonic Diagnostic Imaging System, has been upgraded with the following new features:

New Platform

-
- New Innovative Intel Processor: fast data processing, high integration, low power consumption
 - PC-Platform Operation System: high stability, high flexibility

Note: New platform isn't compatible with previous release

New Standard Software

- iClear: Speckle reduction imaging
- iTouch: One-key quick image optimization
- Steer: Clearly visualizing the needle and anatomy
- Spot Zoom
- iZoom: Expanding clinical image to full screen
- iStorage: directly transfer images and reports to PC via network cable

New Transducer

- 65C15EAV: convex transducer

Note: Do not support 65EL60EA, 75LT38EA, 65EB10EA and 65EC10ED

New Workflow

- New User Interface
- iStation: Powerful patient information management

【Availability】

The upgraded DP-30 is now available.

【Price Policy】

MINDRAY has a competitive price policy for the upgraded DP-30. Please contact the relevant sales representative.
